PROFILE

Full stack developer with **more than five years of experience** designing, building, testing and shipping web and mobile applications for public institutions and companies in Cameroon (Ministry of Finance, CAMRAIL, Port of Douala, Cameroon Civil Aviation Authority). **Technical lead of teams of 3–6 developers** at ADWA SARL, working in Agile. **Laravel, Node.js / TypeScript, Vue.js and React** specialist committed to software quality: **3,500+ automated tests** across recent projects, continuous integration, documented architecture decisions. My method: **find the real problem first, then build the right thing**. Background in software engineering, network and IT security, and electrical & electronic engineering.

TECHNICAL SKILLS

Back end	PHP 8, **Laravel** (10 to 13), RESTful APIs, authentication (Sanctum, Fortify, OTP) · **Node.js / TypeScript**: production APIs (Nitro), **Express**, **NestJS 11** · real-time (**Socket.IO**, Reverb, WebSockets) · **RabbitMQ** messaging · **Python** (Flask, pytest)
Front end	**Vue.js 3**, Nuxt 4, Pinia, **React 19**, React Router 7, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, PrimeVue, Inertia.js · three.js · bilingual FR/EN interfaces
Mobile & desktop	**Android** app with Quasar · **Flutter** (earlier projects) · **Tauri 2** with a native **Rust** layer, and Electron (interactive kiosks, peripheral control)
Databases	MySQL, MariaDB, PostgreSQL, SQL Server, Redis · transactions, locking and concurrency control · MongoDB (personal projects) · UML modelling
Quality & DevOps	**Unit, integration and end-to-end testing** (Pest, PHPUnit, **Jest** and supertest, Vitest, Playwright, pytest) · accessibility checks (axe) · Git (GitHub, Bitbucket) · CI/CD (GitHub Actions, Bitbucket Pipelines) · Docker
Integrations	Mobile Money (MeSomb), SMS / OTP (Vonage), email (SendGrid), ERP, Slack, Google Sheets, GoDaddy DNS, GoHighLevel
Methods & tools	**Agile / Scrum**, Jira, Trello, Notion · code reviews, ADRs, technical documentation
Familiar with	Kotlin, Java, Angular

PROFESSIONAL EXPERIENCE

Lead Full Stack Developer — ADWA SARL, Douala *May 2023 – present*

Technical lead of teams of 3–6 developers (Agile: Jira, Trello, Notion), from requirements analysis to production and maintenance.

- **SERVICES PUBLICS** (services-publics.cm, Ministry of Finance) — lead developer of the national portal for administrative procedures and non-tax revenue collection: OTP authentication, declarations with supporting documents, online payments, real-time notifications (Node.js / Express service, Socket.IO, RabbitMQ). Laravel, Vue.js / Inertia (SSR), Docker.
- **Ministry of Public Service and Administrative Reform** — administrative procedures platform (servicepublic.gov.cm): Laravel 12 API with role-based access control and a React / TypeScript interface; 280+ automated tests and an API contract enforced by the test suite.
- **Banking compliance (CEMAC zone)** — application to collect, check and track the client documentation banks must hold for international transfers, with real-time notifications. Nuxt 4, TypeScript, Zod; 180+ unit tests (Vitest).
- **Self-service kiosks** — CAMRAIL ticketing deployed on interactive kiosks in Douala and Yaoundé stations; multi-service kiosk for an intercity bus operator (pilot of 2 kiosks), designed and built on my own: a Tauri 2 (Rust) + Nuxt 4 app driving the thermal printer and the QR reader, Mobile Money payment, connected to the ERP through a **Node.js / TypeScript façade API** (a JWT minted per call, 520+ tests). ID reader and cash payment planned for phase 2.
- **Mobile app & back office (satellite TV)** — Android app packaged with Quasar, mobile API and Laravel / Vue.js back office: subscriptions, Mobile Money payments (MeSomb), SMS OTP.
- **EQUIP4SAFETY** — technical lead of a B2B aviation-equipment marketplace for ICAO member states, commissioned by the Cameroon Civil Aviation Authority (CCAA). Laravel API, Next.js / React front end.
- **Port of Douala** — contributed to automating the collection of the TEL port fee, with CAMCIS.
- **Other work** — inventory and sales-tracking SaaS; donation platform for the NGO SWAA Littoral; Docker containerisation and CI/CD pipelines.

Full Stack Developer — VMEDIA CONSULTING, Douala *Oct 2022 – Apr 2023*

- Built and maintained several SaaS products for clients.
- Integrated third-party APIs (GoHighLevel, Slack, Google Sheets, GoDaddy DNS) to automate business processes.

Full Stack Developer — FORAMA, Douala *Dec 2020 – Oct 2022*

- Designed and maintained **HAURIZON SHOP**, the company's e-commerce platform.
- Upgraded **HAURIZON PAY**, a SaaS payment platform: better stability and performance, production bottlenecks resolved.

IT Intern — HYDRAC *Sep – Nov 2020*

- Network and server maintenance; built small software tools to remove operational blockers.

INDEPENDENT PROJECTS

- **SchuLyf** — university administration (public code: github.com/kiri1101/student-management-system): admissions, **HMAC-signed receipts verifiable online**, exam access based on payment standing. Laravel 13, Inertia, Vue 3; 580+ tests, full documentation, CI.
- **DrymHome** (my own product, in development) — rental platform: Laravel 13 API on PostgreSQL, CinetPay / PayUnit payments (signed webhooks, idempotent processing), identity verification (one ID = one account, enforced by the database), real-time, Redis; Nuxt 4 apps; 1,100+ tests.
- **Transport planning** (technical exercise, Oct 2026; private code, walkthrough on request) — a complete module, from selecting sales orders to the vehicle's departure: **NestJS 11 API** on SQL Server (parameterised queries, isolated domain layer), 10 business rules enforced even under concurrent access (locks, rowversion, If-Match → 428 / 412), RFC 9457 errors, Swagger, correlated audit log; **Vue 3 / Pinia / PrimeVue** front end, FR/EN; **146 tests** (Jest + supertest against a real database, Vitest) and 11 ADRs.
- **Portfolio** (jordan-tukum.pages.dev) — **React 19** and React Router 7 (static prerendering), a **three.js** 3D scene rendered in a Web Worker (OffscreenCanvas) and loaded on demand, a JavaScript budget checked in CI; Vitest and Playwright tests across 5 browsers, with accessibility checks (axe).
- **yt-mp3** — **Python / Flask** app built for a blind relative; pytest and CI (public code).

EDUCATION

BTech in Software Engineering — IUG Douala, under the mentorship of the University of Bamenda *2026*
60/60 credits · **GPA 3.27/4** · degree being issued. Top modules: Relational Databases (86/100), Website Design (85/100), Intelligent Systems (78.5/100), Final-year Project (77.5/100).

B.Sc in Computer Science, option Network and IT Security — DIT, Douala *2021*

HND in Electrical & Electronic Engineering (Telecommunications) — IUC, Douala *2019*

LANGUAGES & DISTINCTION

- **Languages**: French and English — bilingual (written and spoken).
- **Distinction**: official CCAA delegate at AFI Aviation Week 2025, Victoria Falls (Zimbabwe).
